

REMARKS

Further and favorable reconsideration is respectfully requested in view of the foregoing amendments and following remarks.

Claims 1 and 10 are pending in this application.

Claim 1 has been further amended to recite "X represents a charge-transporting group, which is a hole-transporting group consisting of a 9,10-bis(chloromethyl)anthracene group", because the amendment filed March 23, 2011 to recite "1,9-bismethylanthracene" was a typographical error. Support for the further amendment to claim 1 can be found on page 25, line 7 of the specification.

In view of the foregoing amendment and the reasons provided in the response filed March 23, 2011, Applicant takes the position that the presently claimed invention is clearly patentable over the applied references. Accordingly, it is submitted that the rejection set forth by the Examiner has been overcome, and that the application is in condition for allowance. Such allowance is solicited.

Respectfully submitted,

Shinichiro ISOBE
